

## PROJECT SUMMARY

Ground-up construction of a landmark building incorporating the latest structural design techniques and energy efficiencies, this Class A office features three stories of prime commercial space and two-levels of subterranean parking. Fitting in with the urban charm of Mountain View, the uncertified Silver Level LEED project features a classic architectural exterior integrating the aged brick facade and sustainability of the heritage oak gracing the front entrance.

Thoughtful interior workspaces provide areas for inspiration and technology while the rooftop, distinguished by its Zen-like setting, offers the perfect backdrop for entertaining, team building and relaxation for a high profile client.

With the intersection of Dana and Bryant undergoing its own revitalization, this “pedestrian friendly” district with improved traffic signals, sidewalks and landscaping safely and efficiently serves the bustling downtown marketplace and high-tech community.
