

PROJECT SUMMARY

Interior improvements to a recently constructed 21,050 square foot retail building located within the new Main Street mixed-use project featuring loft apartments as well retail, offices, a hotel and a park. This “flexible-format” Target is designed to serve the more densely populated city centers offering a smaller-format store with grab-and-go items that are tailored more for daily trips rather than bulk shopping. It contains many of the store’s familiar items, but in a more compact space; including a new storefront vestibule, concrete polished floors, market dept, pharmacy, Starbucks’s, Tavola ceiling light weight beam system above entrance and a Starbucks kiosk. A new refrigeration rack was added to the roof, as well as exhaust fans.

Target Express

INDUSTRY: DEPARTMENT STORE

Improvements for a smaller scale Target to give customers a fast and efficient shopping experience

LOCATION: Cupertino
