Judges Statement: *There were many innovative Educational Projects that were worthy of awards, but the Design Tech High School was not only worthy from an architectural design standpoint, but for also taking the educational classroom learning model and turning it upside down. The building's sinuous form blends naturally within the shape of the site, but uses a sleek all-glass façade which allows a view of the learning campus from the outside. Teen appropriate lounge areas in the common areas and hallways are conducive for conversation and collaboration while the classrooms are designed to maximize hands-on learning in workshops and science labs to lectures and computer skills.*

Grand Award

Design Tech High School
Redwood City, CA
Builder: XL Construction
Developer: Oracle Corporation
Architect: DES Architects + Engineers
Planner: DES Architects + Engineers
Interior Design: DES Architects + Engineers
